

**BREAKING PROFIT ALERT**  
 from the desk of Remo Sabene Jr.,  
 Editor-in-Chief, GroundFloor Stocks

## “GLOBAL WARMING INC.”

That's what Wall Street insiders will call  
**Planktos Corp.**, as sales of its Carbon Credits  
 send it soaring from **\$1.25 to \$30!**

**Get in on the groundfloor  
 NOW before...**

- **\$500 becomes \$12,000...**
- **\$1,000 soars to \$24,000...**
- **\$3,000 catapults to \$72,000... and**
- **\$8,000 transforms into a whopping \$192,000!**

Dear Investor, what you're about to read is  
 astonishing...

By the time you receive this letter a  
 115 foot state of the art ship named the  
 Weatherbird II will be arriving off the  
 coast of the Galapagos Islands.

From there it will spend the next few  
 weeks trolling the Pacific Ocean - dumping  
 over 20 tons of iron dust into the water. Dust ground up so fine it  
 will float on the ocean's surface. So what is the purpose of this  
 strange voyage?

ADVERTISEMENT

The New York Times

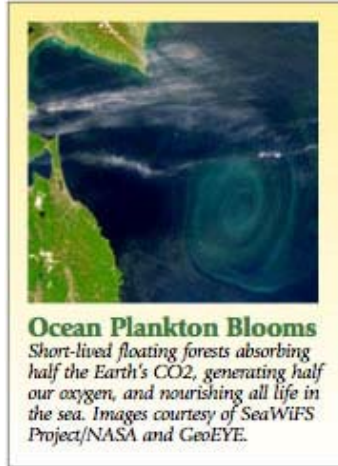

**"Can plankton help save the planet?"**

— The New York Times on Plankton and Planktos

Well, according to **FORBES** magazine the Weatherbird II has embarked  
 on a historic mission:

**"The iron dust (dumped) will cause phytoplankton to bloom on the ocean's surface face, which in theory, will then suck tons of carbon dioxide out of the atmosphere and sink deep into the ocean".**

The news is so remarkable **The Discovery Channel** aired a "global warming" special on the ship and its owner Planktos Corp. on March 30th, 2007.

And **The New York Times** followed up with an expose of its own - featuring both Planktos and its founder in a recent article entitled **"Recruiting Plankton to Fight Global Warming"**.

Then there's **ABC NEWS, USA TODAY** and **The LA Times** who couldn't resist either...

But while the science behind this method of carbon reduction is extraordinary, the real story - the one no one is paying attention to - is the fortunes that are going to be made from its journey.

That's why I hope this letter finds you in good time.

You see, as of this writing, shares in this exciting little company the media is ***gushing*** over are selling for only \$1.25 a share.

But that will soon change.

## **There's no time to wait...Get FAT now or fight for scraps later!**

It sounds crazy I know, but as you read on I think you'll agree that Planktos Corp., stands a real chance of increasing from about \$1 to \$2...jumping from \$2 to \$10 and sprinting from \$10 up to \$30 a share.

And I'm not exaggerating when I say it can happen within just a few short weeks.

Because once the Weatherbird II pulls back into port all bets are off.

As the iron dust takes hold and phytoplankton begins to bloom, a bidding war will ensue for Planktos' much anticipated carbon credits.

***Driving shares up fast in the buying frenzy.***

**Ocean Fertilization: The most effective  
means of combating global warming.**

summer warming in the future**

**"A new study by NASA scientists  
suggests that greenhouse-gas  
warming may raise average  
summer temperatures in the**

"Project aims to 'seed' oceans to heal them."

So reads the headline of the April 3rd 2007 edition of **USA TODAY**.

And above it, a vibrant image of the Weatherbird II with PLANKTOS ECORESTORATIONS - clearly painted on the starboard side of the ship.

What the article reveals is jaw dropping...setting the table for windfall profits for Planktos and its investors alike.

In fact, the only stretch here is believing it won't!

See for yourself:

"Three months ago, NASA released satellite data showing that ocean plant life is rapidly shrinking as more carbon dioxide builds up in the atmosphere...

...The buildup helps feed the climate changes that warm the

Are you starting to get a feel for how quickly Planktos can return 5... 10... or even 30 times your initial investment?

## **The business of global warming – tapping into a \$200 Billion industry**

If you find the story of Planktos, Inc. as fascinating as I do, you'll want to know more about the science behind it.

And I'll show you just that in a moment.

But that's not why I sent you this letter.

No.

You see, I happen to know you're a successful, sophisticated investor.

Summer temperatures in the eastern United States nearly 10 degrees Fahrenheit by the 2080s." 

So let's talk for a minute about exactly what it is that's going to take Planktos from a \$1.25 bargain stock to a \$30 juggernaut.

Carbon credits. You may know them as Carbon Offsets. Or maybe you've never heard either term before.

If not please allow me to clarify.

Simply put, a carbon credit - or offset - is a tradable permit.

It provides a way to reduce greenhouse gas emissions by assigning them a monetary value. One credit, or permit, represents one ton of CO<sub>2</sub> (carbon dioxide) removed from the atmosphere.

In other words, the more carbon credits a corporation buys - the more CO<sub>2</sub> they have the "right" to emit.

Now this is where it gets interesting. Follow me here.

It costs Planktos Corp. about \$1 to produce one carbon credit. Each credit can be sold on the open market for \$20 or so - leaving a \$19 per unit profit.

Now, each plankton bloom they create removes between 8 and 10 million tons of carbon dioxide from the atmosphere.

That means just one ship can generate up to \$200 million per year in revenues.

Add more ships, generate more revenue. And that's exactly what Planktos Corp. plans to do.

Remember, they just set sail on their maiden voyage. The time to get in is now while shares are still just \$1.25.

Wait until they start selling their credits, and launching more ships and you'll miss out on the sweetest, easiest part of their meteoric rise.

ADVERTISEMENT

## **Carbon credits. A virtual "get out of litigation FREE card"**

As the CEO of multi-billion dollar corporation you have two choices. Spend a few measly million on carbon credits. Or face the threat of financial ruin from a growing chorus of politicians and regulators looking to put you out of business.

<b>STOCK ACTION ALERT</b>	
Company . . . . .	Planktos Corp.
Symbol . . . . .	OTCBB:PLKT
Share Price . . . . .	\$1.25
Target Price . . . . .	\$30
Action . . . . .	STRONG BUY!

Or Call .....1-800-733-2447

The choice is obvious. That's why corporate America is leading the carbon credit charge.

In fact, Richard Branson - founder and CEO of Virgin Records is currently offering \$25 million to anyone who develops a technology that can reduce CO2 (a reward likely to go to Planktos).

San Francisco  
Chronicle

**"Sea Life in Peril –  
Plankton Vanishing Usual  
Seasonal Influx of Cold  
Water Isn't Happening."**

Sounds like a lot. But when you're running a \$20 billion company it's a small price to pay for growing your empire in peace.

Now I don't mean to sound cynical here. I think any action we can take to reduce CO2 emissions into the atmosphere is admirable.

But please understand it's the business of global warming that I'm focused on.

A global business that analysts expect will QUADRUPLE as a minimum over the next 5 years...

That's why I urge you to load up on shares of Planktos NOW.

ADVERTISEMENT

## Seeding the ocean... how iron-ore can drastically reduce CO2 in our atmosphere

The science is fascinating. Revolutionary in fact. And yet it seems so obvious.

Here's how it works.

The scientists at Planktos have recreated the red coloring you see in everyday dirt by grinding down iron-ore (an essential plankton nutrient) into a fine powdery dust.

From there they choose geographically remote and plankton deficient areas to unload the dust onto the oceans surface.

## 4 IRON CLAD REASONS TO BUY SHARES OF PLANKTOS CORP. NOW!

**1)** The Discovery Channel, ABC News, FORBES Magazine, The New York Times, USA TODAY and The LA Times have all recently done exclusives on Planktos Corp. They're anxiously awaiting results. Once the Weatherbird II pulls back into port these news outlets will do ALL OF THE SELLING FOR THEM. Setting shares ablaze. You can't pay for that kind of exposure!

**2)** The Global Warming frenzy is reaching a fever

pitch. Short of the Iraq War it's the #1 issue of the day. Even the most insignificant green companies today will return investors profits as "a rising tide lifts all boats..." At \$1.25 a share you'd be crazy not to invest in Planktos.

**3)** The U.S. Supreme Court has just ruled the carbon dioxide (CO2) is a pollutant and as such falls under the jurisdiction of the EPA to regulate it. That means corporations will be forced to cut emissions – or find ways to offset them. That's remarkable news for Planktos Corp.

**4)** A \$500 investment can transform into \$12,000.. \$20,000 or even more. At just \$1.25 a share Planktos Corp. is truly a once-in-a-lifetime opportunity.

Once it hits the water, the trace iron acts as a catalyst in the reproduction of tiny phytoplankton through photosynthesis and creates an organic ocean bloom that lasts about 2 to 3 months (think of it like planting a garden in spring...).

Within that time, newly formed plankton absorbs CO2 from the atmosphere. Once absorbed, roughly half of it will be eaten by grazing animals while the rest sinks deep to the ocean floor...carrying the greenhouse gas with it.

But not before scientists aboard the Weatherbird II measure precisely how much CO2 the plankton ingests per ton of iron.

Based on the absorption rate carbon credits will be structured and ready for sale.

### USA TODAY nails it. PLANKTOS is solving a major threat to the health of our oceans

I mentioned before that **USA TODAY** did an excellent job of highlighting how Planktos is taking the fight to global warming...

...but even without current CO2 concerns and how it affects our weather here on land, our oceans appear to be in grave danger.

According to the **NASA** data I cited earlier, we've experienced

between a 6% and 9% loss in global plankton since the 1980s.

(Though a new Behrenfeld report places that loss much higher at 12%.)

The data also reveals that some regions - like the equator in the South Pacific - have experienced a 50% drop!

It's not hard to imagine what that kind of imbalance can mean to the oceans eco-system.

Or what solving that problem could mean for Planktos and its investors.

## **Reducing our carbon footprint and getting rich in the process!**

Imagine this. You're sitting at home one evening after a long day at work and BREAKING NEWS flashes across your screen.

Naturally this catches your attention so you wait for the story. The teaser headline reads:

**"SMALL ECO COMPANY DELIVERS  
KO PUNCH TO GLOBAL WARMING"**

You watch in amazement as they show footage of the Weatherbird II triumphantly pulling into port. And listen to the news you knew was coming weeks before.

The next morning your \$1 shares are worth \$4. Then \$5.

That's every investor's dream right?

Well, that's exactly how I see the story of Planktos unfolding. And that's why I urge you buy shares now BEFORE it becomes a global blockbuster.

**But there are EVEN MORE forces at work here that should propel shares skyward...**

## **The Supreme Court has just weighed in. CO2 is a global warming pollutant!**

The news is stunning. No one expected it. Yet on April 5th of this year the US Supreme Court ruled that the federal government has the power to regulate carbon dioxide emissions which the court has

officially deemed a pollutant and major contributor to global warming.

This is historic news. It's a major victory for combating global warming. And it's incredible news for Planktos Corp. and its investors.

The ruling means that, by law, polluting industries will be forced to either reduce their emissions or offset them with carbon credits.

Let me say that again.

Major corporations will now be required BY LAW to either reduce their overall emissions (which means reducing production and therefore profits) OR offset their emissions with certified carbon credits.

Not a single investor I know of even knows this ruling has come down. That's why it's so

urgent you get in today.

Because once all of these geopolitical forces line up for Planktos, Inc. it will take off like a moon-bound rocket.

Leaving Johnny-come-latelys far behind.

## **This \$1.25 stock is the most undervalued I've seen in 30 years. The global warming frenzy will send this stock soaring**

Letting Planktos Corp. pass you by at \$1.25 share is a monumental mistake. It would be down right tragic.

I've never seen global conditions lined up for an undiscovered stock like I do now with Planktos Corp.

It doesn't matter whether you think man is causing global warming or not, dear reader - what's important to realize is this:

Global warming is a **booming** business. Finding the right stocks operating within it today will mean fortunes for those who take action.

And Planktos Corp. is far and away the most promising of all. It's truly a phenomenal time to buy shares.

**You read the headlines every day. This is YOUR opportunity to get rich from this undeniable trend...so what's it gonna be?**

The supreme court has decreed it...the media can't get enough of it...and corporate America actively embraces it.

Within the next few months a surge of investment dollars will come pouring into this nascent industry.

Even companies without so much a proper business plan or credible management team will double or triple in value.

While others like Planktos - backed with real science and endless FREE publicity in its corner - will skyrocket beyond imagination.

The question of course is this. Knowing what you know now, do you have the courage to grow rich in this trend - or will you convince yourself that opportunities like this only happen to "other people."

**ADVERTISEMENT**

## **I can't promise I'll contact you again...**

Planktos Corp., is truly an extraordinary opportunity. Soon it will grace the cover of every major news publication...making it the poster-child for combating global warming.

Those who buy it now at \$1.25 will be forever changed.

If you put in \$2,000 its possible to walk away with \$100,000 or even more. You can buy stock now or call investor relations at 1-800-733-2447 ext 111. Above all don't delay.
