Hi Rusi!

The NYTimes spoke to me about your experiment and the BBC and Darpa\$.

I told them

- that in 3 runs we couldn't find fusion.

-That you said that it could take more runs to perfect the technique.

-That you said that bubble cloud details could affect the result and that our system is not a carbon copy.

-that darpa is providing us all funding to get to the bottom of this issue on condition that you cooperate with UCLA to be sure that we carry out a carbon copy of your experiment.

Ken Chang of NYTimes just left a message on my machine saying "Rusi says that he has not yet promised to help UCLA in this endeavor".

If you really said this - please please call them to correct the story.

Should Darpa read such a statement they may have second thoughts.

I believe that the grant which was just approved and which we all signed said that you would cooperate with our efforts.

regards

seth

If the times got the quote wrong I be sorry to bother you.
